

Action Plan Objectives & Targets	Actions	2007 Target trend & progress (Steve Lane)	2007 Plan trend & progress (Steve Lane)	2008 Target trend and progress	2008 Plan trend & progress:
A. To monitor the population in the sub-region Annually	RM1 RM2 RM3	<p>↓ Progress (behind schedule).</p> <p>Progress poor - Leeds University student project work has ceased due to lack of funding – only sporadic field surveying carried out</p>	<p>↑</p> <p>A fairly good year. The information newly acquired from previous student research work in this and other countries has clarified our understanding of the species behaviour and requirements.</p>		<p>↔</p> <p>Reporting on actions was not completed.</p>
B. To maintain the size and range of the known population of <i>Byctiscus populi</i> . 2003-2015	PL1 PL2 SM1 SM2 SM3 A1 RM1 RM2 RM3	<p>↑ Target achieved.</p> <p>Forest Enterprise has been fully informed and guided on the species requirements and distribution at the site and management practices have been adopted accordingly to enhance the population strength and distribution at the site.</p>	<p>Forest Enterprise has not only shown considerable interest in the species, but have fully adopted their management</p>	<p>↑ Target achieved.</p> <p>Forest Enterprise has fully adopted its management documentation practices to the best of its ability to enhance the species' chances of recovery and survival at the site.</p> <p>The SINC designation process for Oversley Wood is, however, still in progress.</p>	<p>However, the population is reported as stable at the species' one site.</p>
C. To assess its habitat needs at its known locality 2006	SM4 RM1 CP3	<p>↑ Target achieved.</p> <p>This has been fairly successfully carried out through the results of student research and other documentation at this site and across the UK (and abroad)</p>			

<p>D. To increase the size and range of the weevil population through sympathetic habitat management and by to introducing it into other appropriate close-proximity areas within its known locality</p> <p>2010</p>	<p>SM3 SM4</p>	<p>↓ No progress.</p> <p>This target is unrealistic because the population has been discovered to be too small and vulnerable at the present time.</p>	<p>documentation practices to the best of their ability to enhance the species' chances of recovery and survival at the site.</p>		
<p>E. To gain information about the species' requirements by liaising with research bodies and to investigate the potential of other Warwickshire sites to support this species</p> <p>2010-2015</p>	<p>RM2 RM3</p>	<p>↑ Some progress (on schedule).</p> <p>Fair progress. Documentation by other research bodies has been obtained and consulted. Surveying of other woodlands in Warwickshire continues.</p>			
<p>F. To use <i>Byctiscus populi</i> as a flagship for the importance of aspen for other scarce insects</p> <p>2003-2015</p>	<p>RM3</p>	<p>↓ No progress.</p>			
<p>G. To raise awareness amongst landowners and managers of this species and the habitat management needed to support it</p> <p>2003-2015</p>	<p>PL2 SM1 SM2 A1 A2 CP1</p>	<p>↑ Some progress (on schedule).</p> <p>Progress patchy but fairly positive. With respect to publication of LBAP and Forest Enterprise liaison work – very positive. In other areas, wanting</p>
