

Action Plan Objectives & Targets	Actions	2007 Target trend & progress (Jane Ellis)	2007 Plan trend & progress (Jane Ellis)	2008 Target trend and progress	2008 Plan trend & progress
A. Establish monitoring of the last remaining Warwickshire site and collate results to determine population status. 2004	SM1 RM2	<p>↑ Target achieved.</p> <p>Monitoring has been undertaken each year since 2004. Only one individual recorded up to present at Hay Wood.</p>	<p>←→</p> <p>Little progress except for advice to FC at Hay Wood which came a little too late and the key area of habitat had already suffered. However, the habitat is</p>	<p>↑ Target achieved.</p> <p>David Brown surveyed the only site at Hay Wood in 2008 in good weather conditions but no individuals have been seen since a record of one individual in 2006. Achieved for original target date but date must be reviewed.</p>	<p>↑</p> <p>More progress now with annual management at Hay wood and liaison with landowners at Princethorpe.</p>
B. Check former sites to establish whether this species is still present 2004	SM2 RM1	<p>↑ Target achieved.</p> <p>No further records for species outside of Hay Wood.</p>	<p>Little progress except for advice to FC at Hay Wood which came a little too late and the key area of habitat had already suffered. However, the habitat is</p>	<p>↑ Target achieved.</p> <p>Forest Enterprise: Forest Design Plan process nearing completion for Hay Wood. Specific habitat for Argent and Sable (young birch) is being maintained through annual management.</p>	

<p>C. Maintain the extent of the habitat by encouraging the protection and appropriate management of the known sites. 2004</p>	<p>SM3</p>	<p>↑ Target achieved. BC have been liaising with FC over habitat management requirements at Hay Wood</p>	<p>recovering and one individual was recorded in 2006. Another setback has been trampling of the area during felling to clear conifers in winter 2006.</p>	<p>↑ Target achieved. In 2008 the habitat at Hay Wood is looking about right for the species (pers.comm. David Brown). Forest Enterprise continue to follow guidance from BC regarding management. Mature birch have been cleared in winter 2007 / 08 to create more low regenerating birch. However, no records of the species since 2006 so population very precarious if still present. Achieved for original target date but date must be reviewed.</p>	
<p>D. Publicise the habitat requirements of this moth to landowners and other interested parties and give advice on beneficial management. 2005</p>	<p>PL1 SM3 A1 CP1</p>	<p>↑ Target achieved. Advice given at Hay Wood, Sutton Park and to Hansons at Bubbenhall.</p>	<p>Ongoing liaison with FC needed if colony is to recover.</p>	<p>↑ Target achieved. BC are working with landowners in the Princethorpe woodlands area to enhance habitat for key butterflies and moths.</p>	
<p>E. Develop a better understanding of the ecological requirements of this species and best management practices</p>	<p>RM3</p>	<p>↓ No progress No progress as population too small.</p>		<p>↓ Still no progress</p>
