

Action Plan Objectives & Targets	Actions	2007 Target trend & progress (Andrew Heath)	2007 Plan trend & progress (Andrew Heath)	2008 Target trend and progress	2008 Plan trend & progress:
<p>A. Maintain extent, maintain / improve condition of, and where possible restore, the available / important feeding habitats 2005-2015</p>	<p>A1 A2 A3 CP4</p>	<p>↓ No progress. Actions addressing this objective relate only to advisory and communication guidance.</p>	<p>↔ The last year has been a year of development for the key stakeholder in delivering this action plan.</p>	<p>No further reporting was carried out in 2008 as this action plan was reported on in 2007.</p>	<p>↔ No update.</p>
<p>B. To increase population size and range by maintaining and increasing opportunities for roosting (particularly in buildings, trees and underground sites) as maternity roosts, hibernation roosts and as roosts for other purposes 2005-2015</p>	<p>PL1 PL2 A2 A3 A4 A5 A6 CP1 CP4</p>	<p>↑ Some progress on schedule. There has been ongoing advice to householders and land owners regarding roosts and no intentional exclusions have occurred in private housing. Statistics on roost destruction under license though DEFRA is not known by the bat group. Hibernation roost data maintains low in Warwickshire and development in this area has been difficult and is likely to remain so.</p>	<p>Warwickshire Bat Group (WBG) is taking a more proactive approach to the monitoring and identification of bat roosts. The group has identified three key species to work on: Nathusius pipistrelle, barbastelle and lesser horseshoe bats.</p>		

<p>C. Ensure adequate landscape elements to provide flight lines between roosts and foraging sites: hedgerow protection 2005-2015</p>	<p>PL1 PL2 A1 A” A3 CP4</p>	<p>↓ No progress.</p> <p>Actions addressing this objective relate only to policy, advisory and communication guidance. However, Warwickshire Wildlife Trust checks all planning applications where bat roosts are, or could be, involved</p>	<p>Extensive work and surveys s planned based on data collected to date. The surveying of the county has increased significantly and the development of training for the general public has been introduced and is planned to develop.</p>		
<p>D. Establish a sub-regional programme to monitor populations at key sites to supplement data from the National Bat Monitoring programme 2006</p>	<p>SM1 SM2 SM3 RM1 RM2 RM3C P2</p>	<p>↑ Some progress on schedule.</p> <p>The Warwickshire bat group collects data and feeds this into the local records for bio-diversity. This is ongoing and effective. The group is actively involved in developing records for Nathusius pipistrelle, barbastelle and lesser horseshoe bats. Financial constraints currently limit the level of activity in this area.</p>	<p>Concerns remain over habitat destruction and particularly interruptions in flight lines, although these are not currently as well-documented as the group would like.</p>
