

“It’s a miracle but completely natural”

Hair loss scientific breakthrough

**Remember
if it looks too
good to be true
– it usually is**

When Damien Grimshore was 19 he noticed his hair was thinning – fast. By 22 he was suffering from what we doctors call ‘catastrophic hair loss syndrome’. In fact, he had no hair at all. Damien’s social life was affected and he lost all confidence. ‘I looked and felt so much older’ he says today.

Fortunately, help was at hand. A visit to the Hairy Science International Clinic was the turning point. We quickly pinpointed the root cause of Damien’s hair loss and he began a course of treatment. Within hours there were signs of re-growth and a week later he had a full head of hair.

The secret lies in the Hairy Science scalp formulation, which uses milk from the Patagonian Yak. This animal lives high up in the Blue Mountains of Patagonia and is famous for its strong, thick coat.

We isolated the ingredient in the milk responsible. 21st century technology and a team of top researchers soon produced a ‘fail safe’ cure for human hair loss. Tens of thousands of our patients have benefited already, and for as little as £100 per week!

Damien is delighted with his new hair. ‘It is thick and glossy and makes me feel ten feet tall. It’s a miracle but completely natural. I cannot thank the Hairy Science International Clinic enough. They restored my hair and they can do the same for you too.’
